

Side-scroller Components: camera and background

Taking on your last week player state machine code. We will integrate necessary features.

Neat new [sheet](#)

Not mistake free... lots of AI generating docs, and other version code

- [auto-generate docs](#)
- looking at [code](#)

Camera Component

From example, understanding attributes

https://www.raylib.com/examples/core/loader.html?name=core_2d_camera

- target
- zoom: clamp

Activity

Update `class Game` of your sprite sheet state machine code to have

1. background generated buildings to
2. camera control/view

Integrating the code of `core_2d_camera.py` incrementally.

Be careful order of `begin/end` contexts. **Test as you go**

Background

[Background scrolling example](#): click texture button and `background texture` image

How does it work?

- Comment some lines of mid, back part
- Why do we need two calls for each?
- What do the different numbers represent?

Integrating the code of `textures_background_scrolling.py` to your own demo.
